

CUSTOM METAL TANK SERBATOI METALLICI SU DISEGNO

This catalogue assist you in designing your own metal tank.

SMA builds the tank to your specifications, for any application you may have, ensuring high quality and safety also for single unit delivery.

Each tank is pressure leak tested as part of SMA quality program to deliver a zero-failure product.

Built on order tank can take up to 15/30 working days delivery.

Questa guida fornisce indicazioni utili per la progettazione di serbatoi metallici.

SMA può costruire serbatoi secondo vostre specifiche per qualsiasi tipo di utilizzo, anche in lotto singolo, garantendo un'elevata qualità e affidabilità del prodotto.

Tutti i serbatoi sono collaudati a pressione secondo il sistema di qualità SMA con l'obiettivo di fornire serbatoi "zero difetti".

Il tempo di consegna per serbatoi su disegno è di circa 15/30 giorni lavorativi.

DESIGN YOUR TANK PROGETTAZIONE DI UN SERBATOIO SU DISEGNO

If you need custom tanks, SMA can build you tanks with different shapes according to your needs, ranging from regular to irregular and very complex ones.

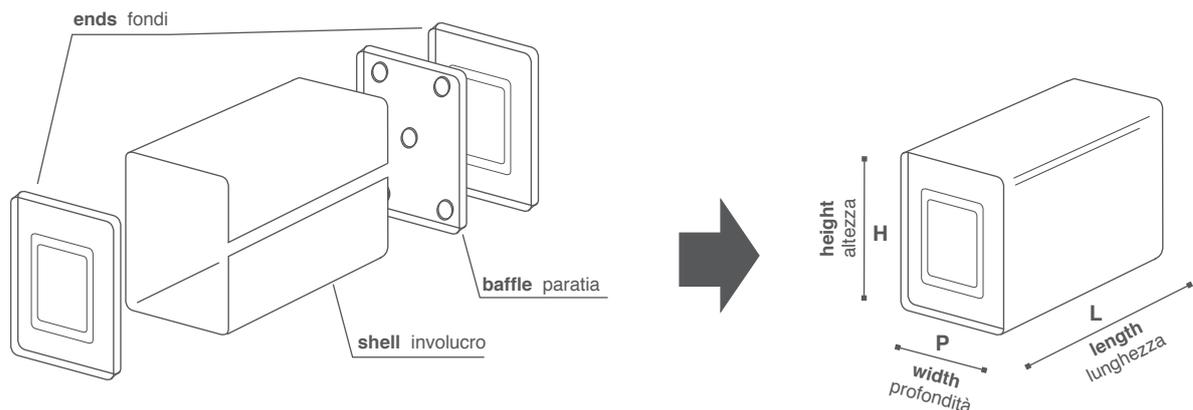

However, if you are able to mount a regular shape, for example rectangular or cylindrical, you will have many advantages concerning cost, lightness, cleanliness, easy placement and stylish look.

This catalogue, precisely, assists you in designing your tank with **REGULAR SHAPE**

choosing through **SMA STANDARD stamped end caps (from now on ENDS)** to be used as the heads and the eventual baffles of the tank, to optimize the use of available space.

SMA può costruire serbatoi secondo vostre richieste con sagome differenti, sia con forme regolari che irregolari e molto complesse; però se siete in grado di utilizzare forme regolari, ad esempio poligonali o circolari, avrete molti vantaggi in termini di costo, leggerezza, pulizia, semplicità di montaggio e aspetto estetico.

In particolare, questa guida vi fornisce utili indicazioni per la progettazione di serbatoi con forme regolari, permettendo di scegliere tra molti fondi stampati standard SMA (d'ora in poi FONDI) per essere utilizzati come testate ed eventuali paratie interne del serbatoio, con l'obiettivo di utilizzare al meglio lo spazio disponibile.

If you have any questions or comments or to place an order, please call, fax or email us.

SMA DOO – Vrsac, SERBIA

To design your tank follow these steps:

Nella progettazione del serbatoio seguire i seguenti passi:

A. KNOW YOUR MAIN REQUIREMENTS DEFINIRE LE RICHIESTE PRINCIPALI

- assess the available space where the tank will be mounted, in terms of height, width and length restrictions
- define the volume requirements
- lo spazio disponibile dove verrà montato il serbatoio, in termini di altezza, larghezza e lunghezza massima
- la capacità richiesta del serbatoio

B. DEFINE VOLUME AND DIMENSIONS DEFINIRE CAPACITA' E DIMENSIONI DEL SERBATOIO

B1. Choose the suitable ENDS, between the several different SMA standard ones detailed in this catalogue, that meet your requirements about the HEIGHT and WIDTH of the TANK.

B1. Scegliere tra i tanti fondi standard SMA elencati quelli che rispondono alle vostre esigenze in termini di Altezza e Profondità del serbatoio.

B2. Decide the LENGTH and corresponding VOLUME of the TANK, according to your requirements.

B2. Definire la Lunghezza e la relativa Capacità del serbatoio secondo vostre specifiche.

Follow Table 1, considering that:

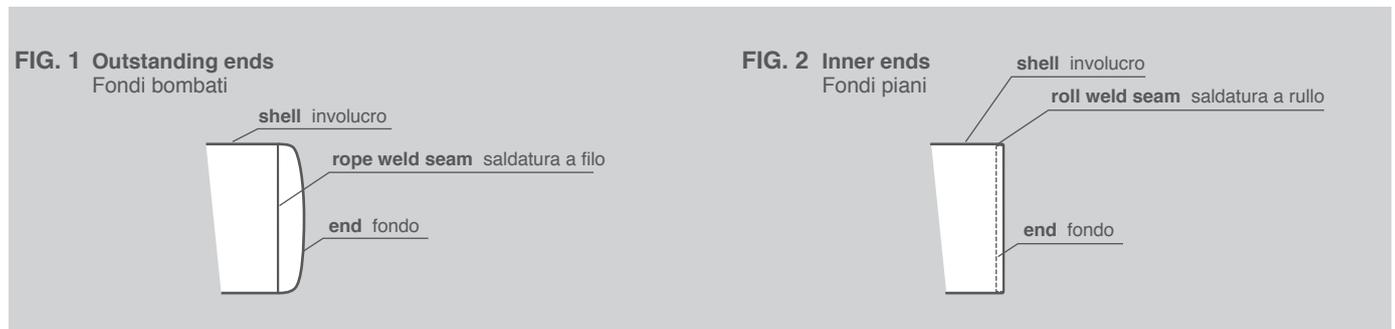

- a) for rectangular shape, you can turn the end: the shorter size of the end can be the height or the width of the tank.
- b) for cylindrical shape, you just have to choose the diameter of the tank.

Seguire la Tavola 1, tenendo presente che:

- a) per serbatoi con forma rettangolare, il fondo può essere ruotato, cioè il lato corto del fondo può essere l'altezza o la profondità del serbatoio.
- b) per serbatoi con forma cilindrica, basta definire il diametro del serbatoio.

Table 1 Tavola 1

TYPE TIPOLOGIA		SHAPE FORMA	ASSEMBLING ENDS-SHELL (see FIG. 1-2) ASSEMBLAGGIO FONDO-INVOLUCRO (FIG. 1-2)	ENDS REFERENCE RIFERIMENTI FONDI
Tank for liquids without pressure Serbatoi per liquidi senza pressione interna	fuel tank serbatoio carburante hydraulic oil tank serbatoio olio idraulico	Rectangular Poligonale	Inner ends roll weld seam Fondi piani saldati a rullo	Tav 110___830
			Outstanding ends rope weld seam Fondi bombati saldati a filo	Tav 840___910
	water tank serbatoio acqua combi tank serbatoio misto	Cylindrical Circolare	Inner ends roll weld seam Fondi piani saldati a rullo	Tav 920___970
			Outstanding ends rope weld seam Fondi bombati saldati a filo	Tav 980___1190
Tank under pressure Serbatoi sotto pressione	air tanks serbatoi aria compressa tank for liquids under pressure serbatoi per liquidi sotto pressione	Cylindrical Circolare	Outstanding ends rope weld seam Fondi bombati saldati a filo	Tav 980___1190

Remark:

- for tanks containing LIQUIDS we suggest to design RECTANGULAR tanks wich offer considerable more volume for a given space
- for tanks UNDER PRESSURE generally CYLINDRICAL tanks are required.

Nota:

- Per serbatoi per liquidi, SMA suggerisce di progettare serbatoi con forma rettangolare, in quanto garantiscono la massima capacità.
- Per serbatoi sotto pressione, SMA consiglia di prevedere serbatoi con forma cilindrica.

C. DEFINE MATERIAL AND PLACEMENT DEFINIRE IL MATERIALE E IL MONTAGGIO

C1. Choose between steel, stainless steel and aluminium. Steel provides strength and is the cheapest option, while Stainless Steel offers advantage of maximum resistance to corrosion and Aluminium of lighter weight with a good resistance to corrosion

C1. Scegliere tra ferro, inox e alluminio. Il ferro garantisce robustezza ed è la scelta più economica, mentre l'inox offre il vantaggio della massima resistenza alla corrosione, mentre l'alluminio abbina alla massima leggerezza una buona resistenza alla corrosione.

C2. Determine placement. The most common placement of the tanks are side-mounting and deck mounting. For each standard end, suggested mounting is indicated in the catalogue, so, for example, you can find that a SMA standard bracket kit suits to your placement requirements.

C2. Definire il montaggio. I fissaggi più utilizzati sono quelli del montaggio laterale (a parete) o a pavimento. Per ogni fondo vengono indicati i montaggi consigliati, per cui, ad esempio, potrete verificare che staffe complete standard rispondono alle vostre richieste in termini di montaggio

C3.SMA will suggest material thickness and eventual baffles; however if you have specification about them or about other features, for example coating, please define.

C3. SMA consiglierà lo spessore del materiale e le eventuali paratie; in ogni caso se avete particolari richieste per questi ed altri aspetti, ad esempio la verniciatura, prego informateci.

D. DEFINE FITTINGS DEFINIRE I COMPONENTI

D1. Decide the welded and loose fittings you need; for example, the filler cap, sending units, sockets for picking-up and returning fuel, for drainage, suction and return ports for hydraulic oil, visual gauge, vents, brackets, other.

D1. Definire i componenti saldati al serbatoio e gli accessori separati; ad esempio, il tappo di riempimento, il gruppo pescante-livello, manicotti per l'aspirazione e il ritorno del carburante, di spurgo, manicotti di aspirazione e ritorno dell'olio idraulico, indicatori di livello visivi, sfiati, staffe, altro.

D2. List the fittings, or, better, mark up them, specifying dimensions and position, in the tank drawing or in a hand drawn sketch.

D2. Fare un elenco dei componenti richiesti o, meglio, indicarli, specificando dimensione e posizione, nel disegno tecnico o nello schizzo del serbatoio

INQUIRY OFFER

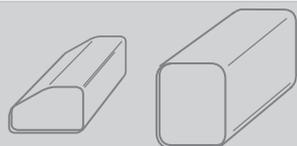

RICHIESTA D'OFFERTA

Request price quotation for your custom tank to SMA

- enclosing the drawing / sketch prepared
- specifying how many pieces you are interested in purchasing.

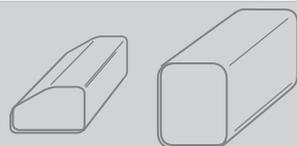

Richiedete un'offerta a SMA per il vostro serbatoio, allegando il disegno tecnico o lo schizzo e indicando quanti pezzi siete interessati ad ordinare.
